<p>A waterproof adhesive, Caberdek Sealfast forms a durable waterproof seal between the Caberdek tongue and groove joint. In addition, Sealfast adhesive can be used to bond the Caberdek boards direct to joists. As a complete seal is formed at the joints no taping is required, saving time and allowing a quicker application process.</p>	<p>Caberdek combines the advantages of Caberdek P5 with a waterproof, slip-resistant film. This innovative covering protects the floor from the elements and potential damage. It also improves the safety of the area. This plus reduced after clean up costs means it is commonly specified throughout the UK construction industry.</p>

Caberdek **SEALFAST**®

The new Caberdek Sealfast flooring system combines Norbord's renowned Caberdek P5 with a powerful structural adhesive.

Speed, simplicity, one adhesive... No time wasting.

Save time on floor assembly... the new Caberdek Sealfast flooring system is here.

This time saving flooring system combines the benefits of using 22mm Caberdek and a double function waterproof adhesive that seals T&G joints and also bonds Caberdek to joists.*

Professional choice

Caberdek Sealfast is, yes you guessed it, fast. Why? Because there's no need to tape the joints. The Sealfast adhesive forms a durable waterproof seal between the Caberdek tongue and groove joint. But there's more... the same adhesive is also used for bonding Caberdek boards to joists. This means it is quicker and cheaper for both on-site use and off-site manufacturers. Plus, with Caberdek Sealfast you get all the benefits of using our famous Caberdek P5 flooring boards, featuring no-cleaning-needed, peel-off film.

We've made ordering easy with two boxes of Sealfast adhesive (each containing 12 x 310ml tubes) providing enough adhesive for 1 pack of 22mm Caberdek (66 boards).

We reckon all this, on top of its show-stopping versatility, 24-hour drying time and easy application via standard skeleton gun should seal the deal. Fast.

Features

- Fully BBA approved system combining 22mm Caberdek and a structural adhesive
- Hardwearing peel clean film
- Single adhesive
- Joint seal
- A highly water resistant adhesive (highest durability class in EN204)
- BBA certificate covers 42 days exposure
- No taping of joints required
- Non-foaming, not messy
- Enhanced racking strength

Benefits

- Don't have to buy separate adhesive and flooring panels
- Clean floor after film removal
- No dual-inventories, mix-ups or time wasting
- Seals the joint against water ingress
- Allows for a quality, long lasting work, and accounts for exposure to elements
- Allows other building work to progress whilst maintaining good protection
- Quicker application process
- Less time cleaning, plus better quality job
- Perfect for offsite work (e.g. floor cassettes)

* Please note: Norbord recommends taping at perimeter edges.
